

QuickGrass[®] Pro Erosion Control/Seed Starter Blanket

American
Excelsior
Company
Fiberex[®] Division

Wood Fibers

American Excelsior Company is the inventor of biodegradable erosion control blankets. Developed in the 60's for large construction and highway projects, Fiberex[®] now offers QuickGrass[®] Pro to retailers and contractors. Since the recent enactment of Phase II of the Clean Water Act, many municipalities have written Curlex[®]/QuickGrass Pro into their building codes. Phase II affects small construction sites of just one acre or greater in size, impacting home builders and contractors.

- Complies with storm water management regulations
- Fast, easy installation
- Enhances grass seed germination by providing super water retention
- Protects seeds from birds and the sun's drying heat
- Because QuickGrass Pro is degradable, there is no need to remove it before mowing

Note: Grass seeds not included

Each roll of QuickGrass Pro comes with a supply of biodegradable E-Staple[®] stakes to help anchor the fiber to the soil and assure the success of your landscaping project. They are much more environmentally friendly than metal staples. E-Staples help to minimize the risk of injury to people and equipment. They have superior holding capability, are water resistant, and do not soften from moisture during storage.

For more information about QuickGrass Pro Erosion Control/Seed Starter Blankets or the new biodegradable E-Staples, visit our website at www.americanexcelsior.com or call toll free: (888) 352-9582.
