

Erosion Control/Seed Starter Blanket

American
Excelsior
Company®

Fiberex® Division

Wood Fibers

American Excelsior Company is the inventor of biodegradable erosion control blankets. Developed in the 60's for large construction and highway projects, Fiberex® now offers E-Mat to retailers and contractors. Since the recent enactment of Phase II of the Clean Water Act, many municipalities have written Curlex®/E-Mat into their building codes. Phase II affects small construction sites of just one acre or greater in size, impacting home builders and contractors

- Complies with storm water management regulations
- Fast, easy installation
- Enhances grass seed germination by providing super water retention
- Protects seeds from birds and the sun's drying heat
- Because E-Mat is photodegradable, there is no need to remove it before mowing

Note: Grass seeds not included

Ask about the new E-Staple® biodegradable stakes, which can be used to anchor the E-Mat erosion control blankets and other landscape fabrics. They are much more environmentally friendly than metal staples. E-Staples help to minimize the risk of injury to people and equipment. They have superior holding capability, and water resistant, and do not soften from moisture during storage.

For more information about E-Mat Erosion Control/Seed Starter Blankets or the new biodegradable E-Staples, visit our website at www.americanexcelsior.com or call toll free: (866) 934-2377.
